DETAILED ACTION

1. An Applicant's Amendment filed on 5/8/08 has been entered. Claim 3 has been amended. Overall, claims 1-8 are pending in the application.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-3, 7, and 8 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Morinaga et al. (U.S. 6,830,043). Morinaga discloses a control apparatus for an internal combustion engine provided with a secondary air supply apparatus (Fig. 1, Nos. 30-38) that supplies secondary air to a portion upstream of an exchange gas control device (Fig. 1, No. 23) in an exhaust system, the apparatus comprising: a detector that detects failure in the secondary air supply apparatus (Fig. 5; Col. 12, Line 21 - Col. 13, Line 9); and a controller that limits an amount of air when failure in the secondary air supply apparatus is detected by the detector (Figs. 6 and 7; Col. 13, Lines 10-37).

4. With regards to claim 2, Morinaga discloses the control apparatus of claim 1, as described above, and further wherein the controller reduces the amount of the air

introduced into the internal combustion engine to the predetermined amount in a stepwise manner (Fig. 7).

5. With regards to claim 3, Morinaga discloses the control apparatus of claim 1, as described above, and further wherein the controller reduces the amount of the air introduced into the internal combustion engine to the predetermined amount at a predetermined change rate (Fig. 7).

6. With regards to claim 7, Morinaga discloses the control apparatus of claim 1, as described above, and further wherein the controller controls an opening amount of a throttle valve provided in an intake pipe for the internal combustion engine so that the amount of the air introduced into the internal combustion engine is limited to the predetermined amount (Fig. 9; Col. 14, Lines 45-63).

7. With regards to claim 8, Morinaga discloses the control apparatus of claim 1, as described above, which contains all of the essential elements of the instant claim. The method to so perform is inherently included.

Allowable Subject Matter

8. Claims 4-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

9. Applicant's arguments with respect to claims 1 and 8 have been considered but are moot in view of the new ground(s) of rejection.
